Bengaluru, India

PROFESSIONAL SUMMARY

Python backend developer with hands-on experience building REST APIs and scalable services using FastAPI, PostgreSQL, and MongoDB. Delivered three full-stack projects independently and in teams, owning backend architecture, authentication, and database design end-to-end. Strong foundation in object-oriented programming, data structures, and software design principles. Seeking an entry-level backend engineering role.

TECHNICAL SKILLS

Backend: Python, FastAPI, Django, Pydantic, REST APIs, WebSockets, Authentication, OOP

Databases: PostgreSQL, MongoDB, MySQL, SQLite

Tools & Practices: Git, GitHub, Postman, Swagger, Data Structures, Algorithm Design, Complexity Analysis, SDLC, Agile Methodologies, Debugging, CRUD Operations, Version Control

Frontend (Supporting): React.js, Next.js, Vue.js, Redux, JavaScript, TypeScript, HTML5, CSS3

ACADEMIC QUALIFICATION

B.Sc in Computer Science

Calicut University, Kerala 2023 – 2026 | CGPA: 7.9/10

PROJECTS

1. Cyber Threat Intelligence Platform [\[Link\]](#)

Tech Stack: FastAPI, MongoDB, AI/ML, React.js

- Built the backend for a cyber threat monitoring platform with FastAPI and MongoDB, powering AI-driven threat analysis.
- Designed REST API endpoints, JWT-based authentication, and MongoDB schema/workflows for threat management.
- Implemented real-time threat detection and reporting logic consumed by the React.js dashboard.

2. Customer Review Analytics [\[Link\]](#)

Tech Stack: FastAPI, Scikit-learn, SQLite, Power BI, React.js

- Owned backend development in a 7-member hackathon team, building the FastAPI service layer for a review analytics platform.
- Integrated Scikit-learn sentiment models into the API and designed SQLite schema/queries for feedback data.
- Exposed processed analytics via REST endpoints consumed by interactive dashboards.

3. Digital Identity Search Platform [\[Link\]](#)

Tech Stack: FastAPI, DeepFace, TensorFlow, PostgreSQL, React.js

- Built scalable REST APIs and PostgreSQL-backed workflows for AI-powered facial recognition and name-based search.
- Designed real-time search and progress-tracking retrieval logic with a privacy-first backend architecture.
- Optimized backend performance for search latency and query efficiency at scale.

ACHIEVEMENTS

- Won 1st Place in an inter-college debugging competition.

CERTIFICATIONS

- Generative AI Career Essentials — Microsoft
- Full Stack JavaScript Development — LinkedIn Learning
- Cloud Architecture: Advanced Concepts — LinkedIn Learning
